

WHAT IS CLAIMED IS:

1. A delivery device for liquid medication or nutrients, or gas, comprising:
 - a source of said liquid or gas; and
 - a delivery member detachably joined to a discharge port of said source, said member including a fluted, open-ended distal portion having a cross-sectional area substantially greater than a cross-sectional area of the discharge port for delivering pressurized liquid or gas supplied by the source into tissue by means of perfusion.
2. A device according to Claim 1, wherein said fluted portion has a rounded outer edge.
3. A device according to Claim 1, wherein said delivery member comprises spaced inner and outer walls at said distal portion of the delivery member.
4. A device according to Claim 3, wherein said inner and outer walls are rounded at outer edges thereof.
5. A device according to Claim 3, wherein said outer wall includes a suction port.

6. A device according to Claim 5, wherein said inner and outer walls are rounded at outer edges thereof.
7. A device according to Claim 1, wherein said source is a syringe.
